
ABOUT THE FUTURE OF MONEY

There are a number of ways that finance professionals will come across digital assets or cryptocurrencies and their day to day work.

There are over a thousand digital assets on the market, and that number is increasing every day.

Understanding where the blockchain project is at will also be very important information for finance professionals to then understand and explain the value or the dangers around a particular digital asset that their client or clients are holding or are thinking about investing in.

one of the biggest challenges for finance professionals is that initial learning curve and staying on top of what is current to help them thrive in a future where we will probably have many types of digital assets and blockchain projects that will affect many different industries.
