
OUR DIGITAL FINANCE OFFERING

So the first suite of micro-credentials that CPA wants to offer are around Digital Finance.

We have developed a whole new capability within our capability framework

that represents these new skills around data and digital

which we're now seeing a greater and greater requirement for employers

for their employees to have skills in that space.

So with digital finance, as the name suggests,

is what are the kinds of skills and areas of knowledge and understanding you would need to deal with finance and accounting in a digital world.

Now of course that's around data.

Some of the modules will cover things like data governance,

data management, data security, cybersecurity,

But it'll also cover other forms of digital money.

So how will the world of accounting change when you're looking at things like cryptocurrencies or

you're looking at measuring value in terms of data rather than in terms of physical assets such as inventory or in terms of cash and cashflow in your ledger and your register.

So the new requirements for accountants

is all focused on the digitisation of the whole financial world.

So our Digital Finance will be an introduction to all of those broad areas of expertise that accountants are going to need in the future.
